DETAILED ACTION

Claim Objections

Claims 4 and 5 are objected to because of the following informalities: In the last two lines of claim 4, the phrase "wherein said recess has ends getting wider in an upper direction is a slanted line shape" is confusing and unclear. It would be helpful to indicate that the recess extends along the circumference of the piston and that the ends are the circumferential ends having angled end walls, which slant upwardly as they extend outwardly.

In claim 5 "at least two recesses for receiving an expanding gas are formed at a symmetrical portion with respect to an axial line of the piston head" is unclear. Perhaps, it could be clarified by indicating that the recesses are diametrically opposed to each other. Note also that if the claim language in claim 4 were clarified, it would be easier to clarify claim 5, since the language would make it clear that the recesses extend in a circumferential direction. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 4, as best understood, are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Glover, Jr. et al (4,114,518). Note two recesses 18 which

Application/Control Number: 10/751,027

Art Unit: 3747

extend along the circumference of the piston and have angled end walls 38, which slant upwardly as they extend outwardly. The recesses are formed over at least substantially ¼ of the circumferential section (see column 1, lines 30-35 and Figure 1). Note that the Glover, Jr. et al reference is more focused on dispersing thermal concentration than on receiving expanding gas, but it is inherent that the same action and effect of receiving the expanding gases during the power stroke of the piston would take place in the process of dispersing thermal concentration through the recesses.

Allowable Subject Matter

Claim 5 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 6 and 7 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within

Page 4

Application/Control Number: 10/751,027

Art Unit: 3747

TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marguerite J. McMahon whose telephone number is 703-308-1956. The examiner can normally be reached on flex.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yuen Henry can be reached on 703-308-1946. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
